## TP-Series Capacitors

NWL's TP-Series capacitors are the ideal low voltage, high frequency, AC resonant capacitor solution. The low induction terminals allow for low resistant connections to printed circuit boards (PCBs) or laminate bus structures.

TP-Series capacitors are well suited for high frequency and high currents in power supply applications including:

- VAC RMS resonant tank circuits.
- Low impedance loads

Unique features of the TP-Series capacitor include:

- **Low Inductance Terminals** – Able to mount capacitor on printed circuit boards or laminate bus structure.
  - **Lightweight** – The aluminum case with resin filled construction keeps unit light enough to secure with terminals only.
- No additional brackets required.
